(415) 56CLARK

Big Data Engineer, Tech lead

Experience

ngmoco;)

Aug 2010 — Present

Lead Engineer Data & Analytics

Created scala server infrastructure, including servlet frontend and Akka backend services, that can handle up to 15k messages per server per second.

Architected Hadoop jobs using Hadoop, Avro, and Hbase.

Lead two other individual contributors in the Analytics and Data Platform group.

Created Hadoop jobs to count unique users, unique devices and event occurrences per amount of time.

Built software to start, stop, and add to Hadoop/Hbase/Zookeeper clusters on Amazon's EC2.

Designed and implemented javascript UI to display tens of thousands of data points per day per game in a discoverable HTML interface.

316 Ventures

December 2009 — August 2010

Software Development Engineer

One of two engineers to redesign and build a new thrillcall.com

Implemented realtime and background content scraping systems to process and display pricing data from external web sources.

Halved page load time by optimizing database access, creating automatic asset minification scripts, configuring caching, and other web development best practices.

Microsoft

June 2008 — December 2009

Software Development Engineer

Resolved over 80 bugs in multiple areas of Windows Presentation Foundation to reach zero bug bar on schedule.

Corrected blocking bugs in WPF to enable Blend and Visual Studio to adopt Windows Presentation Framework.

Received a level promotion in the first year.

Created a hotfix for a high priority bug in WPF libraries of .NET, enabling windows customers to type diacritics.

Lead the effort to create a .NET WPF implementation of Microsoft Ribbon; implemented the custom window code to allow integration into the title bar.

Drove customer adoption WPF solutions by answering questions on MSDN Forums and Codeplex.com.

Microsoft

July 2007 — September 2007

Software Development Intern

Prototyped a new control for use with WPF News Reader.

Worked with multiple teams to implement new streams of revenue.

Developed xml tools to deliver MSDN Magazine online using the WPF News Reader SDK.

NifeEdge Software

2005 — 2006

Founder

Founded custom software firm to serve companies with small and medium size projects.

Designed and wrote internal web based software to expand sales and track employee productivity for Area Circulations Inc.

Kennesaw State University

2003 — 2006

Kids College Instructor

Named "Instructor of the Year" for the Continuing Education Division in July, 2006.

Developed entry and advanced level curriculum for classes in computer game programming.

UsaTestPrep.com

2005 — 2005

Contractor

Freelance PHP/MySQL Coding for interactive web application.

Created and delivered a login and login tracking system on time and on budget.

GlobalCompass.com

2002 — 2003

Assistant Network Technician

Maintained over 200 Linux systems.

Helped with network emergencies.

Skills

Big Data

I design and implement solutions to make large volumes of data drive real business value.

Scalable Servers

I build and test highly concurrent server to meet low latency and high availability requirements.

Drive Quality

I strive to create quality products by adopting test driven development and other best practices.
